

# Customized Electrical Equipment Maintenance Programs

By working closely with our customers we will identify and generate an inventory of all the equipment requiring maintenance and evaluate the detailed list to highlight the components critical to your operation. Using the science of "Predictive Maintenance," whereby each piece of equipment is evaluated for its individual maintenance needs and tests, our diverse team of technical experts will create a comprehensive **Preventative Maintenance Program** that is tailored to the needs of this equipment.

In implementing the Preventative Maintenance Program, *Dynamo Electric's* technical team will use the latest technology and procedures in testing or maintaining the equipment. Test data will be evaluated and any corrective actions required to fix problems will be recommended before they create unplanned downtime. The test data will then be trended over time in what will become a customer owned trending program. This is a proven process that has allowed us to design and implement plans to improve system performance, reliability, and safety.

Our customized electrical maintenance program will work in conjunction with, or be easily integrated into, existing maintenance programs to achieve higher reliability and more cost-effective operations of electrical and control systems throughout your facility.

## How can our Customized Electrical Equipment Maintenance Programs help you?

- Reduce maintenance costs by optimizing preventative maintenance schedules.
- Achieve higher equipment reliability.
- Minimize unplanned outages and related lost production.
- Our Electrical Equipment Maintenance Packages are developed and tailored to suit the individual needs of each client.
- All of our maintenance program customers are given first priority in scheduling requests.
- For our maintenance program customers that request 24-hour emergency service, *Dynamo Electric's* diverse technical team can arrange to be available 24-hours per day, 7 days per week.
- *Dynamo Electric's* diverse team of technical experts include: engineers, electrical and mechanical technologists, journeymen and apprentice electricians, and journeymen power-linemen.

We have successfully established preventative maintenance programs in a variety of industries across Saskatchewan and currently service several long-term customers under our maintenance programs.
